LOCATION
Yeongtong-gu, Suwon, Gyeonggi-do

VISA
D-10 (job seeking)

EDUCATION

Chonnam National University
B.A. in International Trade
2019.09 – 2023.08 · taught mainly in Korean

LANGUAGES

Korean — business level (Korean-taught degree, living in Korea)
English — fluent
Uzbek — native
Russian — elementary+

KAKHKHOROV Shokhjakhon (Sean)

Full-stack Developer

Applied AI and DevOps

3+ years of professional experience

PROFILE

Full-stack developer with 3+ years of professional experience building web interfaces, APIs and Linux deployments. My project work includes creator discovery, shipping-document review and source-grounded AI assistants, using TypeScript, React/Next.js, NestJS, Python/FastAPI, MongoDB and PostgreSQL.

WORK EXPERIENCE

IT Local — Full-stack Web Developer

Uzbekistan | 2023.06 – 2026.01

- Built and maintained websites for **20+ client companies** (construction, retail, food service, corporate, public sector) in a team of 4+ developers: responsive React, Bootstrap and Tailwind CSS pages, and APIs with authentication, authorization and input validation.
- Designed database schemas; sped up list and search pages that slowed as data grew, using indexes matched to filters and sort order, plus pagination.
- Set up and secured **5–15 Ubuntu servers**; ran Node.js services with PM2 and Docker behind Nginx, with Cloudflare for DNS and TLS.
- Documented manual SSH deploys, then moved them into a **CI pipeline** so teammates could release using the same reviewed steps.
- Traced outages through Nginx, PM2 and app logs, fixed the cause and documented each fix; reviewed teammates' code and handed over every system to my replacement.

Tech: Node.js, React, Tailwind CSS, Ubuntu, Nginx, PM2, Docker, Cloudflare, CI

Atlantis Investment — Backend Developer

Uzbekistan (alongside studies) | 2022.05 – 2022.12

- Built MVC-based RESTful APIs with Express.js, including session and JWT sign-in, bcryptjs hashing and Multer uploads.
- Designed MongoDB databases with Mongoose, with indexes for search, filtering and pagination; tested endpoints in Postman.

Tech: Node.js, Express.js, MongoDB, Mongoose, JWT, Multer, Postman

PROJECT EXPERIENCE

CreatorHub — creatorhub.site

Solo full-stack project | 2026.04 – present

Creator discovery platform for Korea with English, Korean and Uzbek interfaces.

- Designed, built and deployed a Next.js/NestJS platform with GraphQL, MongoDB, private Socket.IO inquiry chat, creator workspaces and administrator moderation.
- Prevented duplicate inquiries with request keys checked in a transaction plus unique indexes; built a notification worker with 60-second leases and per-batch checkpoints so it resumes after a restart.
- Built a Gemini finder grounded in site content, and a Docker/Nginx release workflow with health checks and automatic image rollback. 293 automated checks (backend 162, frontend 108, deploy 23) recorded on 17 Oct 2026.

Tech: TypeScript, Next.js, NestJS, GraphQL, Socket.IO, MongoDB, Gemini API, Docker Compose, Nginx, GitHub Actions

TECHNICAL SKILLS

Frontend
TypeScript, JavaScript, React, Next.js, Apollo Client, Redux Toolkit, TanStack Query, Vite, Tailwind CSS, Material UI, Bootstrap, HTML/CSS (Sass)

Backend
Node.js, NestJS, Express.js, GraphQL, REST APIs, Socket.IO, JWT & OAuth, Zod, Python, FastAPI

Databases & queues
MongoDB (Mongoose), PostgreSQL, Redis, BullMQ, MySQL

Applied AI & retrieval
Gemini API, OpenAI API, OCR (Poppler, Tesseract), structured extraction, BM25, Chroma, Reciprocal Rank Fusion, Kiwi tokenizer

DevOps & testing
Linux (Ubuntu), Docker, Docker Compose, Nginx, PM2, GitHub Actions, Cloudflare (DNS, TLS), Jest, Supertest, pytest, Git, Postman

AI coding tools
Claude Code, Codex, Cursor, with human review and automated checks

PROJECT EXPERIENCE (CONTINUED)

CargoCheck AI — GitHub

Shipping-document review tool | Development project

- Developed a React/NestJS workflow for uploading invoices and packing lists, reviewing extracted fields against the original documents, correcting values and exporting PDF review reports.
- Combined Poppler/Tesseract extraction with deterministic quantity, unit and decimal-arithmetic checks; added reviewer confirmation, decision history, and invalidation of decisions when underlying values change.
- Tested PostgreSQL/Redis integration and live Gemini extraction during development. The initial PostgreSQL adapter stores state in a transaction-locked JSONB row; extracted values always require human review.

Tech: TypeScript, React, NestJS, PostgreSQL, Redis, BullMQ, Gemini API, Poppler, Tesseract, Zod, decimal.js

Lexara — lexara-top.vercel.app

Collaborative document Q&A project | Contributor

- Helped another developer build Lexara, a document Q&A platform with workspace-based retrieval and source-cited answers; the code was pushed through my collaborator's GitHub account.

Project stack: Python, FastAPI, React/Vite, PostgreSQL, SQLAlchemy, Alembic, pgvector, OpenAI, BM25/RRF

Korea Visa Assistant — GitHub

Bilingual retrieval assistant | In development

- Implemented article-aware Korean legal-text chunking and hybrid retrieval with Kiwi tokenization, BM25, Chroma vectors and Reciprocal Rank Fusion.
- Connected the retrieval engine to FastAPI web and Telegram interfaces, with cited-answer and no-key search modes. Added evaluation tooling for hit@k, recall@k and MRR; labelled evaluation and public deployment remain in progress.

Tech: Python, FastAPI, Kiwi, BM25, Chroma, OpenAI API, Telegram Bot API, pytest, GitHub Actions

Sofiya Bookstore Earlier project

- React/Redux Toolkit storefront on an Express REST API with MongoDB, with JWT sign-in for readers and an EJS admin panel with session login.

Tech: React, Redux Toolkit, MUI, Express, MongoDB, EJS, Multer
